REFERENCES, Ch. 25

63. Model heat engines: TINI Sales, Box 1431, Lafayette, CA 94549; demonstration kits: Nitinol Devices, 1436 View Point, Escondido, CA 92027.

68. R. A. Herendeen, T. Kary, and J. Rebitzer, “Energy analysis of the solar power satellite,” *Science* 205, 451 (1979). The original idea is due to P. E. Glaser, “Power from the sun: its future,” *Science* 162, 957 (1968). It would be more convenient if there were widespread photovoltaic solar available for the satellite to send energy onto Earth’s night side. This idea has been discussed by G. A. Landis, “A supersynchronous solar power satellite,” *Proceedings SPS ’97 Conference* (Montreal, Canada: Canadian Aeronautics and Space Institute, Canada, and the Société des Électriciens et Électroniciens, France, 1997), 327.
